## **DETAILED ACTION**

### ***Response to Amendment***

The receipt of preliminary amendment of 6/6/2001, is acknowledged. Claims 1-12 have been canceled. Claims 13-22 have been added and are pending.

### ***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 13-14, 21, 22, drawn to a nucleic acid encoding immunoreactive peptide and detecting kits, classified in class 424, subclass 204.1.
- II. Claims 15-16, drawn to immunoreactive polypeptide, classified in class 530, subclass 300.
- III. Claim 17, drawn to a nucleic acid that corresponds to nucleic acid of Figure 1, classified in class 514, subclass 44.
- IV. Claim 18-19, 20, drawn to hybridized nucleic acids and methods of detecting, classified in class 435, subclass 91.1.

The inventions are distinct, each from the other because of the following reasons:

Inventions of Groups I-III and IV are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the products of Group I or III can be used in a different method such as induction of immune response.

Art Unit: 1648

Inventions of Groups I-III are mutually exclusive and patentably distinct products each are structurally and functionally different products, which are made by different methods and have different uses, and have different modes of operation as well as functions. The examination of all groups would require different searches in the U.S. Patent Shoes and scientific literature and would require the consideration of different patentability issues (MPEP § 806.04, MPEP § 808.01).
